

Energio Tactica™ 2.0

Energio Tactica™ 2.0 is a communications application that delivers true dynamic interoperability by providing convergence and interoperability to users anywhere, regardless of network or device.

This Freedom 4 Wireless (F4W) solution provides the ability to run an array of application functionality across ad hoc, peer-to-peer, wide area, cellular, Ethernet, wide-area wireless and VSAT networks.

Additionally, you may customize Energio Tactica by integrating the applications you use on a daily basis.

You will be able to extend your critical applications and networks easily, without the requirement of expensive servers, routers and a third-party VPN.

Remote users are connected from any where in the world, regardless of the type of wireless device (as long as it has a fixed IP address), over any type of wireless satellite, GPRS, EDGE, EVDO or other IP-based wide-area networks.

Provides:

- Voice, video and data applications via any network for any IP device
- The ability to layer any security protocols you currently employ
- An easy-to-use, icon-driven interface for quick adoption and a low cost of training
- The ability to easily integrate the applications your organization needs
- An extension of your network to remote users, increasing telework efficiency
- Administrative controls over user access to applications and functionality
- Low-cost, quick implementation

Features and benefits:

Auditing and encryption

- All voice, video, data and text activity fully logged and available for audit
- Implement any security protocols you currently have in place

Audio

- Audio quality and subsequent throughput usage determined by the user
- Self-populating user lists shows who is available as well as who has voice capability
- Multicast audio with one-to-many relationships

Video

- View any recognizable camera without need for a server
- User can define the video frame rate to optimize performance
- Easily enable cameras and choose video source
- User able to control camera within the application
- Multicast video with one-to-many relationships

File transfer

- Peer-to-peer transfer files up to 1GB, with or without a server
- No FTP is needed
- Ability to handle larger files than e-mail
- Activity is fully logged, meeting government audit standards.

Collaboration areas

- Chat room-like collaboration area presents easy-to-understand icons, so users are able to use application immediately
- Any number of users can "chat" privately, excluding all other available users
- User list identifies: available users, audio and/or video capabilities, their status
- Users are able to customize the presentation of text

Logging

- All audio, video, file transfers, private and public messages are fully logged
- Audio and video sessions can be recorded to available storage media
- All changes to status (name, entering/leaving area) are fully logged
- Meets all government audit standards
- Ability to log to network or local file location

Available options:

Energio VoIP Module

- Turn your desktop or notebook into a phone
- Take your phone anywhere you have an IP connection
- PBX functionality

Energio XMDT Bundles (available in 1-, 5-, 25- and 100-user kits)

- Energio Tactica 2.0
- Energio VoIP module
- DID VoIP phone line
- 12 months of VoIP service (unlimited calling in the U.S. and Canada)
- Wireless headset
- USB CCD camera

Minimum requirements:

Memory: 256MB RAM

Processor: Intel® Pentium® III 500MHz or equivalent x86 architectures

Disk space: 3MB for application

Operating systems: Windows® 2000, XP Home, Pro Embedded and Tablet PC
